Lab 7

1-) Create a new DB called lab7.

Develop a **RESTful** Express Application for the following operations: Find/FindOne/Add/Delete

for an entity called: lectures, users and students.

```
lectures = [{_id, course, lecture}]

users = [{_id, fname, lname, email, password}]
```

- Test your API using Postman
- Implement a route (GET /search/:q) to search if the lecture name contains the passed :q parameter.
- Implement a route (GET /search?q) to search if the user fname contains the passed :q parameter.
- Send the results as JSON.
- Return the same result object for each request.
